KPI Definitions and Business Reasons

Total Headcount: Measures the active workforce available to the company.

New Hires: Tracks workforce expansion and recruitment activity.

Gross Payroll: Shows total employee earnings before deductions.

Net Payroll: Shows the total amount paid to employees after deductions.

Employer Payroll Cost: Measures the total payroll expense incurred by the employer.

Cost Per Paid Employee: Shows the average employer payroll cost per paid employee.

Overtime Share: Highlights overtime expense as a percentage of employer cost.

Leave Without Pay Days: Tracks unpaid leave recorded through payroll.

If Management Could Track Only Five KPIs

The five highest-priority KPIs would be:

1. **Total Headcount** – workforce size.
2. **New Hires** – recruitment and workforce growth.
3. **Employer Payroll Cost** – total employee cost to the business.
4. **Cost Per Paid Employee** – average workforce cost.
5. **Overtime Share** – additional labour cost monitoring.

I would remove Gross Payroll and Net Payroll because Employer Payroll Cost already provides the broader company cost measure.

I would also remove Leave Without Pay Days because it is a supporting operational measure rather than a primary company-health measure.
