Monthly cost and attrition trends

Data quality and interpretation

- Each source was aggregated to department-month grain before joining.
- Payroll overtime hours were reconciled against attendance overtime hours.
- Only approved leave on working days was included.
- Employer cost already includes overtime pay; overtime cost is displayed separately and is not added again.
- The exit rate is a descriptive measure, not proof that overtime causes attrition.
- The PQ-13 reference file was not available in the project files, so reference reconciliation remains pending.
